

G++ is the C++ compiler on `empress.csusm.edu`

`man g++` for details.

`g++ <list .C files here>` to compile (never list .h files)  
`./a.out` to execute

`script <any new filename>` to record test results

run your program here

`exit --` everything from script to exit will be recorded in the file.  
You should download the script file to your PC and print it.

Empress has been configured to support the C++ 11 standard. Run this command after logging in:

`scl enable devtoolset-1.1 bash`

This will set your environment to use G++ 4.7 rather than the Red Hat version 4.1.
